

# The NeRF Reverse Engineering Workflow

PROCESS SPEED

10 SECONDS

STEP 01

### Orbital Capture

An unskilled factory worker uses any standard smartphone to record a quick 10-second orbital video of the broken physical part.

 Zero Hardware Cost

STEP 02

### NeRF Cloud AI

The video frames are processed by Frontier Neural Radiance Fields (NeRF) and Gaussian Splatting to extrapolate perfect 3D depth and geometry.

 Generative Spatial AI

STEP 03

### Digital Mesh Synthesis

The neural point cloud is instantly converted into a watertight, mathematically perfect polygonal mesh and exported as a CAD file.

 .STEP / .STL Format

STEP 04

### Factory Execution

The perfectly synthesized digital twin is sent directly to existing CNC machines or industrial 3D printers for instant fabrication.

 Immediate Production
