

Scan2Fab AI

Generative Spatial Pipeline for Advanced MSME Manufacturing

⚙️ NeRF Cloud Engine v2.0

PHASE 01 : INPUT

Physical Edge

Orbital Video

Standard 4K Smartphone Capture

Unskilled factory worker records a simple 10-second video of the broken mechanical part. No laser scanners, no calibration, completely non-invasive.

📶 Encrypted Cloud Uplink

💰 Zero Capital Expenditure

NeRF Compute

GPU CLUSTER

Gaussian Splatting: Deep Neural Networks extrapolate exact 3D geometry from flat 2D video frames.

PHASE 02 : OUTPUT

Digital Factory

CAD Synthesis

.STEP / .STL File Generation

The AI outputs a mathematically perfect, watertight 3D digital mesh. This file is fed directly into the MSME's existing CNC or 3D printers for instant fabrication.

🕒 Sub-millimeter Precision

🚀 Instant ROI & Fabrication
